RESEARCH

AI: A Lightweight System for Tolerating Concurrency Bugs (FSE '14)

We designed and implemented a novel software-only tool to tolerate concurrency bugs on-the-fly, *without using roll-back*. This work is cooperated with Dr. Shanxiang Qi (UIUC) and Prof. Shan Lu (WISC).

Won SIGSOFT Distinguished Paper Award.

INTERNSHIP

SEP. 2014 - DEC. 2014	Fulltime Intern at Google NYC Working on a project about improving database testing.
MAY 2013 - AUG. 2013	Developer at MeePoTech Developed the first version of MeePo's Android client, and the userspace filesystem part of its desktop client.
AUG. 2012 - MAY 2013	Fulltime Intern at System Research Group, Microsoft Research Asia Under Chuntao Hong's mentoring, I re-wrote Microsoft Search Technology Center's L-BFGS implementation in MPI, which reduces the execution time from 3 days per 40 iterations to less than 3 hours (2TB data in total, 20*16 cores). And I also wrote a MSMPI plugin for YARN. Finally, I have got an <i>excellent</i> assessment for this internship.
